

Little Hope Creek Wastewater Improvement Project

Charlotte Water is continuing preliminary engineering work in your neighborhood for an important wastewater improvement project that will improve service, reduce risk for wastewater overflows and protect water quality in Little Hope Creek.

Project Facts and Timeline:

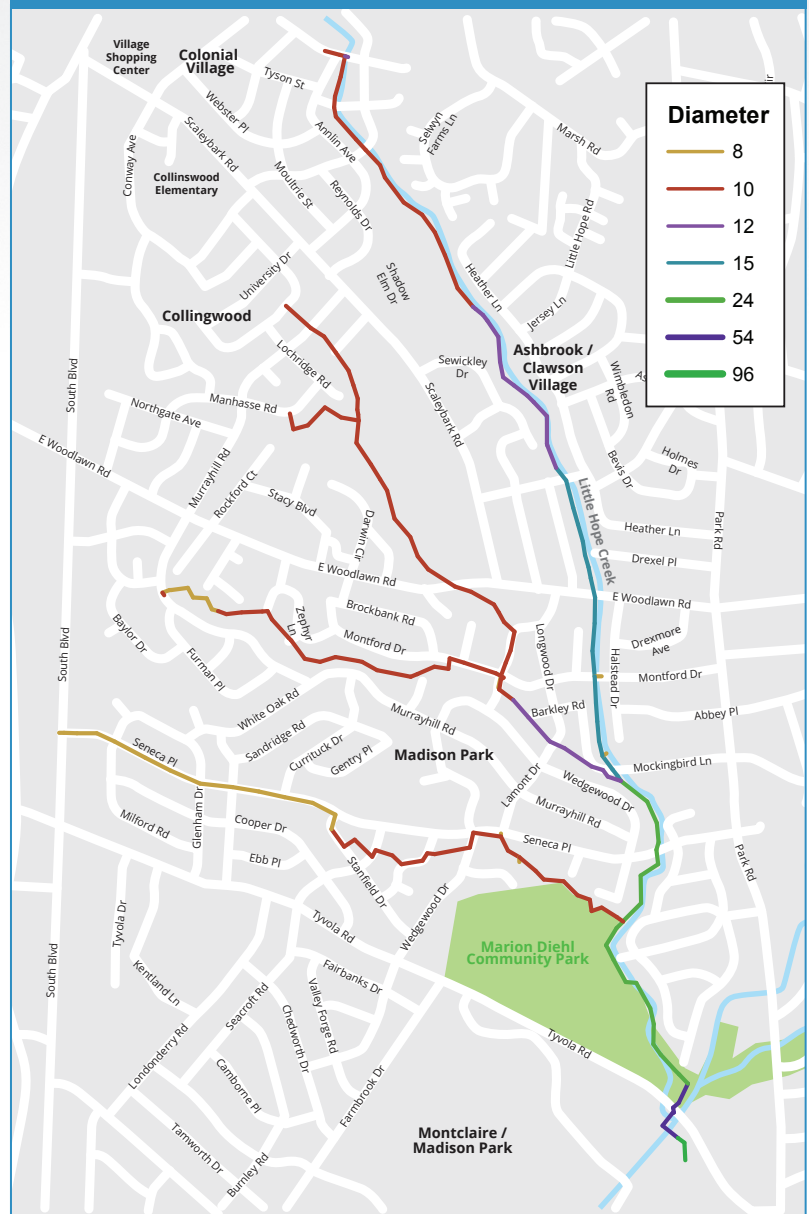

- Approximately 33,000 linear feet of wastewater pipe to be replaced
- Existing wastewater pipeline to be replaced ranges from 8-inch diameter to 24-inch diameter
- Preliminary planning to final design is 14 months (February 2019 - April 2020)
- Point repairs to the existing wastewater system will begin in early 2020
- Construction will begin in mid-to late 2020

Field Activities to Expect:

- Marking specific areas with temporary flagging, ribbons and wooden stakes that will help in the future design
- Land surveying and underground utility marking
- Soil sampling
- Geotechnical investigations
- Video inspection of existing pipe
- Easement acquisitions

Existing Alignment
